krutarth.a@somaiya.edu | +91 9662991858 | LinkedIn

OBJECTIVE

Engineering student fascinated by how intelligent systems learn, adapt, and align with the people they're meant to serve from fine-tuning language models to designing the evaluation loops that decide whether they actually work. Grounded in Python, deep learning frameworks, and applied ML research, with hands-on experience across model training, evaluation, and real-world AI system deployment. Looking to bring that curiosity to an AI/ML research or development internship.

EDUCATION

Bachelor of Engineering in Artificial Intelligence and Data Science, K. J. Somaiya School Expected 2027
of Engineering – CGPA: 8.972

12th Standard (CBSE) – 82% 2023

10th Standard (CBSE) – 91% 2021

TECHNICAL SKILLS

Programming Languages:	Python, C++, Java, JavaScript, SQL
ML & Deep Learning:	TensorFlow, PyTorch, scikit-learn, NLP, Transformer Architectures, RLHF/RLAIF, LoRA Model Fine-tuning & Evaluation, RAG (Retrieval-Augmented Generation)
Computer Vision:	OpenCV, YOLOv5, Roboflow, Object Detection
GenAI & APIs:	Gemini API, Groq API, LLM Agent Orchestration, Permission-Gated Task Execution, Google Cloud APIs (Calendar, Gmail, Sheets, Maps), RESTful API Design
Backend & Web Development:	FastAPI, Flask, Asynchronous Python, Node.js, Express, React 19, TypeScript, Tailwind CSS v4
Databases & Security:	PostgreSQL, asyncpg, SQLAlchemy 2.0, SQLite, Relational Schema Design, Append-Only Audit Logging, OAuth 2.0, JWT Auth, Firebase Admin SDK, HMAC-SHA256 Token Signing
Data & Tools:	Pandas, SQL, Git, VSCode, Pytest, Asynchronous Testing

EXPERIENCE

AI Research Intern Feb 2026 – May 2026
EllanorAI

- Worked on Reinforcement Learning and alignment systems, contributing to RLHF/RLAIF pipelines and research workflows for large language models.
- Designed and prototyped deep learning architectures for language models, including transformer-based systems.
- Contributed to an in-house RL alignment library (ThinkRL), focusing on modular APIs, reward modeling, and scalable training pipelines.
- Assisted in training, fine-tuning, and evaluation of Large Language Models using alignment methodologies.

Member, Image Processing Department Sep 2023 – Feb 2024
KJSCE Robocon

- Built and optimized image processing pipelines with Python and OpenCV for robotics competitions.

- Implemented real-time object detection (YOLOv5, Roboflow) for autonomous robot navigation and targeting.

Web3 Intern

Feb 2025 – Mar 2025

Blockwee

- Developed web platforms with Peachworld, enabling live user engagement and large-scale content delivery.
- Collaborated across design, product, and engineering teams to ship full-stack features end-to-end.
- Implemented scalable backend APIs and contributed to real-time data processing pipelines.

PROJECTS

Crewmate — Gamified AI Co-Founder Console

Independent Project | [GitHub](#)

- Architected and built a full-stack, gamified AI co-founder platform (FastAPI, PostgreSQL, React 19 + TypeScript, Tailwind v4) featuring a sleek console dashboard and real agent execution loops.
- Engineered a boundary-gated autonomy system where the AI organically levels up (Level 1 to 5), capable of transforming single natural-language prompts into fully drafted Google Slides presentations, automated Gmail complaint resolutions, and dynamic Google Forms.
- Built an asynchronous execution engine using Groq LLM inference to orchestrate 10+ sandboxed business tools, maintaining an immutable, append-only mission audit log via SQLAlchemy 2.0 to securely track all AI operations.
- Implemented secure, stateless dual-layer authentication using Firebase Admin SDK and Google OAuth 2.0, utilizing HMAC-SHA256 signatures for robust token validation without server-side sessions; covered by an asynchronous Pytest suite.

Nexus CRM — Full-Stack Support Ticketing Platform

Independent Project | [GitHub](#)

- Architected and built a full-stack, multi-tenant support-ticketing CRM end-to-end: Node.js/Express + SQLite backend, React 19/TypeScript/Tailwind frontend with custom hash-based routing (no router library).
- Designed dual-layer authentication (JWT for email/password, Firebase Admin SDK for Google OAuth) with unified token issuance and automatic account linking across auth methods.
- Built a versioned REST API (auth, tickets, analytics) with transaction-based atomic ID generation, parameterized queries, and centralized error handling.
- Implemented an animated, real-time-feeling UI (GSAP, Framer Motion, Recharts dashboards) with optimistic state updates; covered the backend with an 11-test Jest/Supertest suite, debugging a test-isolation race condition along the way.

CivicIQ — AI-Powered Election Education Assistant

Hack2skill PromptWars Hackathon | [GitHub](#)

- Built an election-education assistant using the Google Gemini API and Google Cloud services, deployed as a Flask + React web app
- Authored the project SOP linking the work to UN SDG 4 (Quality Education) for the FutureMinds Summit, Thailand

SABER College Chatbot

SIH Hackathon 2024

- Architected a campus-scale chatbot using LLaMA and Flask, delivering instant, context-aware support to thousands of users.
- Implemented a RAG pipeline retrieving from a web-scraped campus knowledge base to ground responses in accurate, context-specific information.

- Led end-to-end feature development and deployed robust, scalable solutions in cross-functional teams.

Soil Health Data Extraction Pipeline

Independent Project | GitHub

- Reverse-engineered a government geospatial portal (soilhealth.dac.gov.in) that renders data through map tiles rather than exposing it via standard API/HTML, and built a Python pipeline to extract it end-to-end
- Designed a 5-stage workflow — metadata resolution, tile generation, image-based marker detection (Pillow), coordinate-to-feature lookup (WMS GetFeatureInfo), and structured CSV export
- Built a parameterized CLI (argparse) supporting filtering by state, district, cycle, and nutrient, producing auditable records with full source lineage

CERTIFICATIONS

Virtual PromptWars by Google for Developers (Hack2skill) | Digital Transformation (University of Virginia) | Leadership Skills (IIM Ahmedabad) | Financial Markets (Yale University) | Introduction to Large Language Models (Google Cloud) | Introduction to Generative AI (Google Cloud) | Introduction to Responsible AI (Google Cloud)

ADDITIONAL QUALIFICATIONS

- Finalist in 3 Case Study Competitions — CaseQuest 2026 (KJSSE E-Summit), MergeMania 2026 (SPIT E-Summit), and FCRIT Green Club Ideathon 2026.
- Actively learning: LangChain, RAG pipeline design.
- Passionate about building intelligent, real-world AI systems that solve practical problems.
- Quick to learn new technologies, driven by curiosity and a growth mindset.
- Experienced presenting technical results to peers and senior stakeholders in multicultural teams.
